## Fire Suppression Systems for Vehicles and Mobile Plant

### Protect Your Vehicles Against The Devastation Of Fire

The waste and recycling industry brings with it many hazards in the protection of Off-Road Vehicles and Mobile Plant equipment. These machines operate in an environment containing an abundance of flammable Class A materials. - The risk of fire is high.

Compactors, Wheeled and Tracked Loaders, Compost Turners, Cranes, Shredders, Chippers and Telescopic Handlers often work around the clock in rugged environments. On these vehicles highly flammable fuels, oils and hydraulic fluids flow through pressurised lines within centimetres of hot turbochargers, manifolds and engine blocks. Even the smallest fire can lead to machine down time, costly repairs to plant and premises, not to mention the potential harm to operators.

Installing the Ansul A101 or A101/LVS Fire Suppression System can be a low cost investment, preventing loss of production, along with the damage fire can cause to your plant machine.

Ardent is an independent fire protection company – a pure fire suppression specialist – that protect your business, staff and heavy plant from the devastating effects of fire. We're used to creating solutions for the problems of protecting heavy plant and equipment – it's what we are good at and how we have built a world-wide reputation.

We have a large team of fully trained engineers located both in the UK and world-wide, giving local support. This allows us to react to callouts quickly, reducing down time and protecting your equipment.

**Call the sales team on +44 (0) 870 162 5400 to discuss fire suppression and protection for your equipment.**
